

Ukraine

Ukraine

Milestones achieved since start of the project

- 1. **Ministry of Health** – partner
- 2. Crossing to **international treatment protocols**
- 3. Opening of **new reperfusion centers** (purchase of equipment, legislative base, provision of consumables, etc.)

Ukraine

What were main challenges? And major successes?

1. Understanding the government to change the STEMI treatment system
2. Financing and equipping of new reperfusion centers
3. Training of specialists in interventional cardiology

Ukraine

Programs with less than 3 years: objectives for the next 3 years

1. «**PCI Registry**», as a result - understanding the real situation of diagnosis and treatment of STEMI patients.
2. Control over the dynamics of changes and long-term results, the data in authoritative national publications
3. Clear understanding of the reasons for the slow implementation of new technologies in the treatment of STEMI patients
4. Contact with **government agencies** regarding changes in the emergency assistance system

Ukraine

What is left to be completed for the objectives to be full reached?

To create a national STEMI patients Care System, and to increase the number of PPCI more than 600 per million population (now 204 per million population), delivery within hours of more than 70%

Ukraine

Objectives for the next 3 years

1. Increase the **number of reperfusion centers**
2. Launch the «**Patient Campaign**»
3. Start activity on the program «**Contract for Life**»
4. Conduct a detailed **economic analysis** of the new system of treatment of STEMI patients

Ukraine

What are the next key activities for the next 6 months?

1. A large information program for doctors and patients, together with the Ministry of Health (TV interviews, social advertising, articles and publications and the results of correct treatment and how to take advantage of the opportunity PPCI)
2. Start a new site «Stent4life»
